

Internship Report

Submission Date:

09/10/2025

Bahria University Islamabad Campus

NAME: Muhammad Taqui

ENROLLMENT: 01-136221-021

SEMESTER/BATCH: BSAI – 8A

ORGANIZATION: Asasen Corporation

DURATION: 2 Months – (3 July 2025 – 10 September 2025)

DOMAIN: Data Science (Market Analyst)

BRIEF INTRODUCTION:

During our internship at **Asasen Enterprises**, our team of interns worked under the **Market Research Department**. The focus of the internship was to apply **Artificial Intelligence and Data Science techniques** to analyze market trends, consumer behavior, and business performance indicators. This collaborative experience allowed us to understand how AI-driven analytics support decision-making and how data models can enhance strategic business outcomes.

INTERNSHIP DUTIES:

- Collaborated as a team to collect, clean, and analyze market and sales data from multiple sources.
 - Used **Python libraries (Pandas, NumPy, Matplotlib, and Seaborn)** to explore datasets and visualize emerging trends.
 - Conducted **predictive and descriptive analyses** to identify customer segments and forecast potential growth areas.
 - Assisted in developing **machine learning models** for demand forecasting and product performance analysis.
 - Utilized **Natural Language Processing (NLP)** tools to analyze customer sentiment from online reviews and social media.
 - Ensured data integrity and maintained documentation of analysis procedures as part of team records.
-

MILESTONES:

- Understood the company's market strategy, target audience, and analytical framework.
 - Gained exposure to **real-world datasets** and professional data analysis practices.
 - Worked collectively on **data visualization and interpretation** for weekly progress discussions.
 - Contributed to the **evaluation of key performance indicators (KPIs)** for business growth.
 - Strengthened professional communication and teamwork skills in a data-driven environment.
-

LEARNING OUTCOMES:

- Developed strong practical knowledge in **data science workflows**, including data acquisition, processing, and visualization.
- Improved understanding of how **AI techniques support market research and predictive analytics**.
- Enhanced teamwork, coordination, and communication skills in collaborative data projects.
- Gained exposure to **AI-driven decision-making systems** and their application in real businesses.
- Strengthened technical expertise in **Python, SQL, and business analytics tools**.
- Learned how to interpret data-driven insights to support **marketing and operational strategies**.
- Understood the importance of collaboration, ethical data handling, and clear reporting in professional environments.
